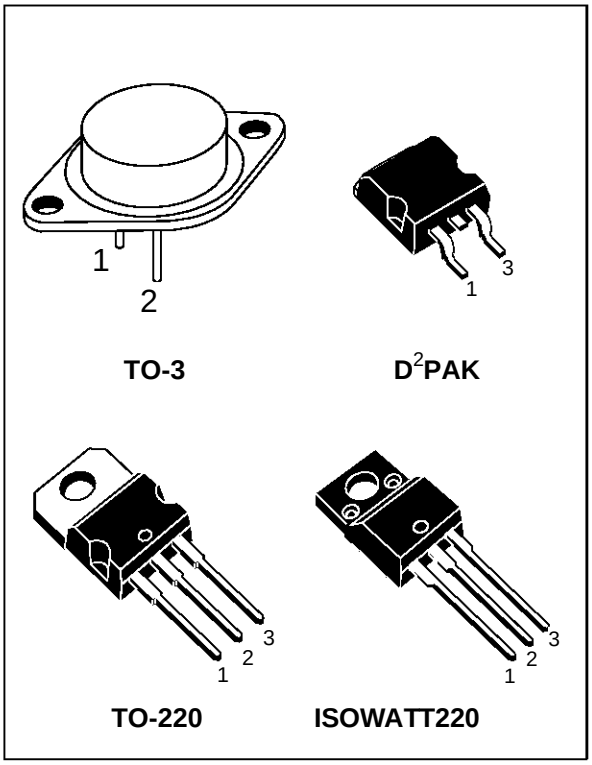
SGS-THOMSON MICROELECTRONICS

L7800 SERIES

POSITIVE VOLTAGE REGULATORS

- OUTPUT CURRENT UP TO 1.5 A
- OUTPUT VOLTAGES OF 5; 5.2; 6; 8; 8.5; 9; 12; 15; 18; 24V
- THERMAL OVERLOAD PROTECTION
- SHORT CIRCUIT PROTECTION
- OUTPUT TRANSITION SOA PROTECTION



DESCRIPTION

The L7800 series of three-terminal positive regulators is available in TO-220 ISOWATT220 TO-3 and D^2PAK packages and several fixed output voltages, making it useful in a wide range of applications.These regulators can provide local on-card regulation, eliminating the distribution problems associated with single point regulation. Each type employs internal current limiting, thermal shut-down and safe area protection, making it essentially indestructible. If adequate heat sinking is provided, they can deliver over 1A output current. Although designed primarily as fixed voltage regulators, these devices can be used with external components to obtain adjustable voltages and currents.

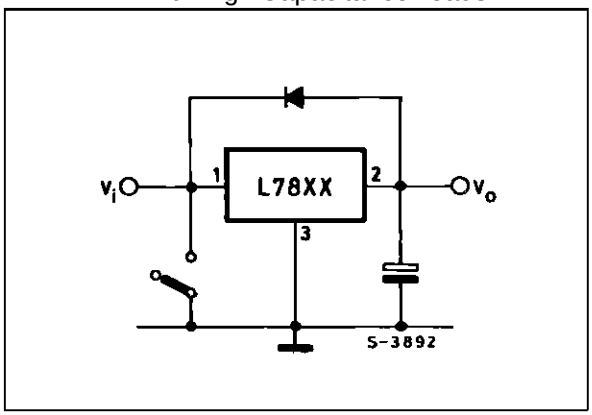
Figure 33 : Protection against Input Short-circuit with High Capacitance Loads.



Application with high capacitance loads and an output voltage greater than 6 volts need an external diode (see fig. 33) to protect the deviceagainst input short circuit. In this case the input voltage falls rapidly while the output voltage decrease slowly. The capacitance dischrges by means of the Base-Emitter junction of the series pass transistor in the regulator. If the energy is sufficently high, the transistor may be destroyed. The external diode by-passes the current from the IC to ground.
